## Change of Basis Matrices

Suppose B, B' are basis for an n dimensional vector space V

$$\begin{array}{lll}
\left(B \cdot B \cdot \left[v\right]B = \left[v\right]B' \cdot \left(B \cdot B' = \left[tb\right]B' \cdot \left[tb\right]B'\right] \\
\left(B \cdot B \cdot \left[v\right]B = \left[v\right]B' \cdot \left(B \cdot B' = \left[tb\right]B' \cdot \left[tb\right]B'\right] \\
\left(B \cdot B \cdot \left[v\right]B = \left[v\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot \left[v\right]B = \left[v\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B' - \left[tb\right]B'\right] \\
\left(B \cdot B \cdot B' = \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B' - \left[tb\right]B' \cdot \left(B \cdot B' = \left[tb\right]B' - \left[tb\right]$$

(B>D

by reducing the augmented matrix  $[M_B \mid \mathbf{b}_j]$ . Thus all n coordinate vectors  $(\mathbf{b}_j)_{B'}$  can be found at once by reducing the augmented matrix  $[M_B \mid M_B]$ . But this is precisely what our boxed procedure for finding  $C_{B,B'}$  calls for. We conclude that

$$C_{B,B'} = \begin{bmatrix} | & | & | & | \\ | (\mathbf{b}_1)_{B'} & (\mathbf{b}_2)_{B'} & \cdots & (\mathbf{b}_n)_{B'} \\ | & | & | & | \end{bmatrix}.$$
(9)

The B'(a) = (B+B'(a)) I stherentix

$$\begin{bmatrix}
T(a_0) \\
B' \\
CBACB
\end{bmatrix}$$

$$\begin{bmatrix}
B \\
CBACB
\end{bmatrix}$$

$$\begin{bmatrix}
A \\
CBACB
\end{bmatrix}$$

$$\begin{bmatrix}
A \\
CBACB
\end{bmatrix}$$

11. 
$$T: P_2 \to P_2$$
 defined by  $T(p(x)) = p(x + 1) + p(x)$ ;  $B = (x^2, x, 1)$ ,  $B' = (1, x, x^2)$ 

WTS: Matrices RB and RB' and an invertible matrix C, such that Rb' = inv(C) (RB) C for the linear transformation

$$\frac{(x+y)+x}{(x+y)+x} = \begin{bmatrix} 1 & 1 & 5 \\ 3 & 5 & 0 \\ 5 & 1 & 1 \end{bmatrix}$$

$$\frac{x_5+5y+1}{(x+y)_5} = \begin{bmatrix} 5 & 1 & 1 \\ 5 & 0 & 0 \\ 5 & 1 & 1 \end{bmatrix}$$

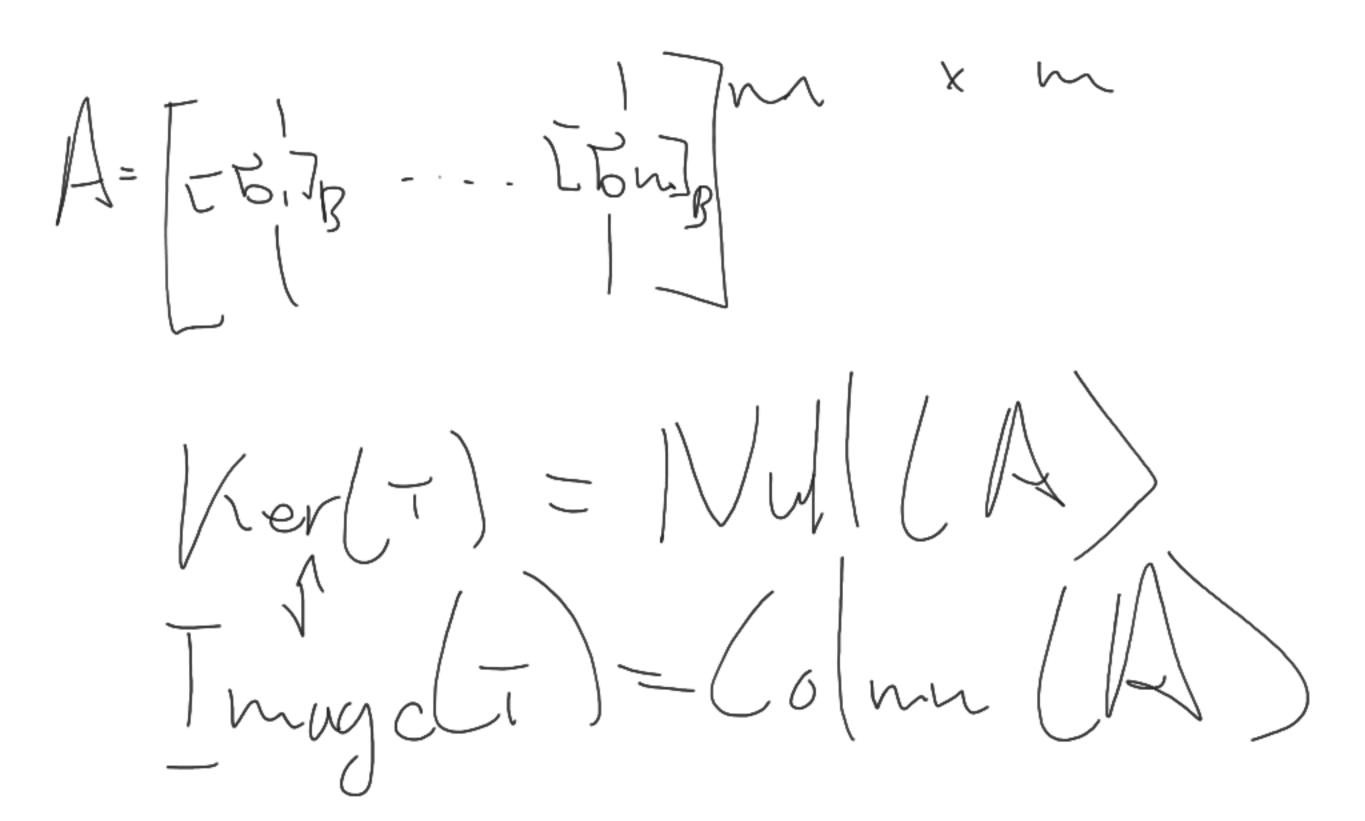

$$RB' \rightarrow B' = (IRB(B))$$

$$(B' \rightarrow B' = [0])$$

$$(AB' \rightarrow B'$$

R B'>B' = [ [] ([])B')

T: V - > W V has dimension m, then V is spanned by B, B = (b1, ..., bm)

A is diagonalizable if all of the eigen value's algebraic multiplicity sum to n https://pub.math.leidenuniv.nl/~strengtc/la1na\_2017/fraleigh.pdf
